

# Fat classes are bad

a.k.a. A large class vs. a class hierarchy

S.Ducasse, L. Fabresse, G. Polito, and P. Tesone

# Goals

- Remember the *Implementing Not* Lectures
- *Transform Self Type Check* Object-Oriented Reengineering pattern

## Example: BibTeX

```
@inproceedings{Scha03a,  
  author = {N. Schaerli and S. Ducasse and O. Nierstrasz and A. P. Black},  
  title = {Traits: Composable Units of Behavior},  
  booktitle = {ECOOP},  
  publisher = {Springer Verlag},  
  year = {2003}}
```

```
@article{Teso20b,  
  author = {P. Tesone and S. Ducasse and G. Polito and L. Fabresse ...},  
  title = {A new modular implementation for Stateful Traits},  
  journal = {Science of Computer Programming}, ...}
```

```
@book{Duca22a,  
  author = {S. Ducasse and G. Rakic and ...},  
  title = {Pharo by Example},  
  publisher = {Keepers of the lighthouse},  
  url = {http://books.pharo.org}}
```

# Example: BibTeX

- Different entries: inproceedings, book, article, techreport, phd....
- Different fields: key, year, institution, booktitle, title...

## A single class in Citezen :(

```
CZScoped << #CZEntry  
  slots: { #type . #key . #fields };  
  sharedVariables: { #ExtendedFieldKeys . #FieldKeysToRemove };  
  sharedPools: { CZFieldPool };  
  package: 'Citezen-Model'
```

# isSomething methods

```
isArticle  
  ^ self type = #article
```

```
isBook  
  ^ self type = #book
```

It is always worth to have a look at users of these isSomething methods

## Another example: CZField

```
CZScoped << #CZField  
  slots: { #key . #value };  
  package: 'Citezen-Model'
```

```
CZField >> isDoi  
  ^ key = #doi
```

# Consequence

```
CZField >> visitField: aField
```

```
self outputStream nextPutAll: '<span class="" , aField key,"">'.  
aField isPDF
```

```
ifTrue: [outputStream nextPutAll: '<a href=""'.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href=""'.  
aField isDoi
```

```
ifTrue: [outputStream nextPutAll: '<a href=""'.  
aField isDoi
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

```
ifTrue: [outputStream nextPutAll: '<a href="https://doi.org/'.  
aField dispatchVisitor: self.  
aField isURL
```

# When using a Fat class

Not having a class hierarchy:

- **Impossible to dispatch** logic because there is **only one** class
- Simple extensions require **many changes** to the conditional code
- Difficult subclassing **without duplicating/adapting** the methods containing the conditional code
- Adding a new behavior always results in:
  - changes to the same set of methods and
  - adding a new case to the conditional code
- Remember the Implementing Not Lectures

# Two kinds of type checking conditionals

## Self type checks

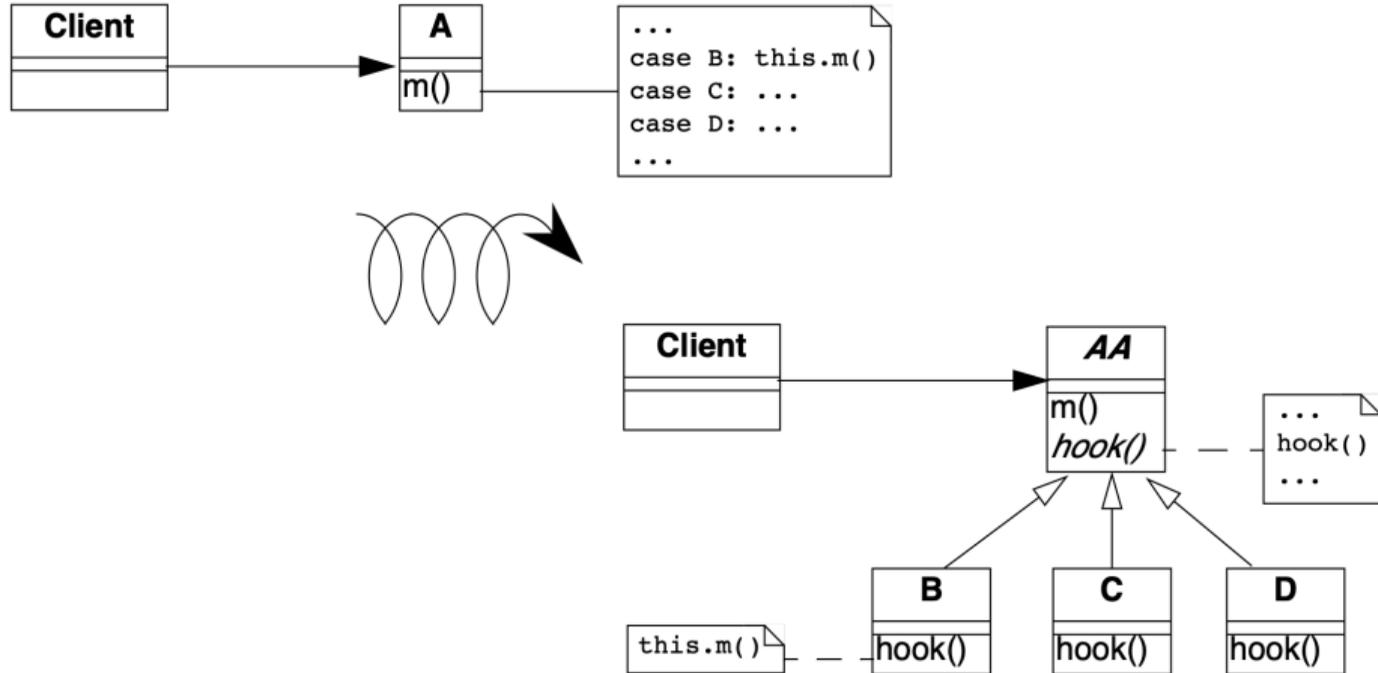

- check some internal values to invoke self methods
- not that bad

## Client type checks

- Violate The **do not ask, tell** principle
- Defeat late binding and inverse the flow of control
- Unnecessary in a large class

# Transform self type transformation

# Conclusion

- Favor dispatch
- Create classes to encapsulate knowledge
- Apply the **Do not ask, tell** principle
- Read *Object-Oriented Reengineering Patterns*

Produced as part of the course on <http://www.fun-mooc.fr>

# Advanced Object-Oriented Design and Development with Pharo

A course by

S.Ducasse, L. Fabresse, G. Polito, and P. Tesone
