

## Challenge 0

Using the Zinc HTTP library available by default in Pharo, get the pharo logo from <http://pharo.org/files/pharo.png>. Convert it into a morph and open it in Pharo. You should obtain something similar than the picture below.

**Hints:**

- The class `ZnEasy` offers several handy messages to ease HTTP requests.
- The message `asMorph` converts low level graphical elements (form) into Morph (graphical objects).
- The message `openInWorld` open graphical objects.
